## PROJECTS

### MAGNUM

It's an ERP for a textile company. It's used for managing the employees and the internal processes of the company. Currently working on this project.

### FETTFAM

Fettfam is a social networking app in which a user can register and search for other people according to their interest and location. In addition, a user can also send gifts to another user while chatting. In this project i worked on the backend as the app is just for iOS devices.

### AUCTION APP

Auction app as the name describes is for bidding on auctions. The users can bid on different auctions and in the end the user with maximum bid is the winner. Socket IO was used in this project. Worked on backend logics as well as the dashboard part.

### HEALR

Healr a medical App for patients as well as for doctors. In this app the patients can schedule an appointment with the doctor. Store their personal records and share with the doctor. The doctor can create a visit history as well as a prescription in the app itself.

### CHAT APPLICATION

This is not an official project, This is a chatting application which is available for desktop platforms. The technologies used in this project are electronJS, SQLite3, NodeJS, MongoDB, ExpressJS, AngularJS. Till now data is not stored locally but in the next version it'll have local storage using SQLite3.

**XBEAUTY(MLM)**

Xbeauty is multi level marketing app where the user will get credit when they a new downline is added. In this there are two Databases used MongoDB and MSSQL which is the client's CRM. Worked on both backend as well as front end.

**HANDSHAKE**

It's like a visiting card app where users can share their info by handshaking in the app. Worked on the backend logics.

**GOGRABER**

GoGraber is for people who travel in their car a lot. In this app a user can join a campaign happening in his area and can earn money by the distance travelled along with the advertisement on his car. Worked on the backend as well as admin and advertiser dashboard.

**MAHASHRIASTRO**

Mahashriastro is a fortune teller website where a user can search for his horoscope. worked on the multi lingual part of the website.
